Inquiry into Energy Policy and Planning in Wales

EPP 128 – John and Lilian Gordon

Dear sirs

Energy conservation certainly needs to be considered and over a period of time I have attended meetings and written to the local authority regarding wind farms and pylons and remain totally opposed to both on the grounds that

- a) the capital outlay and maintenance costs appear to vastly outweigh the benefits
- b) the transport involved will cause all sorts of travelling problems on our roads
- c) the landscape itself will be polluted by these monstrosities .

Solar panels would appear to be a much better all round idea if only people were encouraged to install these by way of a substantial price reduction. Money to be wasted on proposed wind farms etc should be moved in this direction.

Kind regards

John and Lilian Gordon
