Inquiry into Energy Policy and Planning in Wales

EPP 131 – David Surry

Dear Sirs,

Wind turbine technology has been totally discredited as an efficient and reliable source of energy.

The beautiful countryside of Mid Wales, is being systematically destroyed by the building of gigantic wind turbines and the proposed erection of huge pylons carrying cables across our outstanding landscape.

There is only one solution regarding the pylons problem and that it must be insisted upon that all cables be underground and this I'm sure, apart from stopping building onshore wind turbines altogether, it is the only solution to saving what's left of one of Wales major income generators, tourism.

I sincerely hope that the will of the residents of Wales will prevail and that further wind farm building will be halted.

yours sincerely

David Surry
